## DETAILED ACTION

### *Election/Restrictions*

Claims 1, 4-18 and 31 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(b), claims 19-23 and 25-27, directed to the process of making or using the allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104. Claims 28-30, [which have been canceled], directed to the invention(s) of a method of promoting interaction between an immobilized biomolecule and a target biomolecule, do not require all the limitations of an allowable product claim, and are NOT been rejoined.

Because a claimed invention previously withdrawn from consideration under 37 CFR 1.142 has been rejoined, **the restriction requirement among groups I-III as set forth in the Office action mailed on February 20, 2007 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

***Allowable Subject Matter***

Claims 1, 4-23, 25-27 and 31 are allowed.

The following is an examiner's statement of reasons for allowance. The primary reason for allowance is the inclusion of the limitation regarding the protruding spot part forming a roughly V-shaped bottom surface wherein the intensity of light detected from the V-shaped bottom surface when read by a confocal detector is different from the intensity of light detected from a flat surface on top of the protruding part. While the patent to Agrawal et al. discloses in general a substrate with microstructures having various shapes such as a pillar or cone, or the like, there is no specific disclosure of the bottom of the substrate forming substantially a V-shape. Applicant's disclosure specifically describes a purpose for the substantial V-shape--the purpose being to provide for a difference in intensity of reflected light which can be used to specify the position and size of the flat surface. Such capability of the substrate is not disclosed by Agrawal et al., nor is such purpose disclosed by Agrawal et al. Thus, while Agrawal et al. disclose in general a textured substrate and suggest that the texture can be formed by various shapes, it cannot be said that the particular shape of the substrate surface claimed by Applicant and the capability of such a substrate, which is a result of such structural features, would have been obvious.
